

Project Topic: Single Sign-On (SSO) & Zendesk Configuration

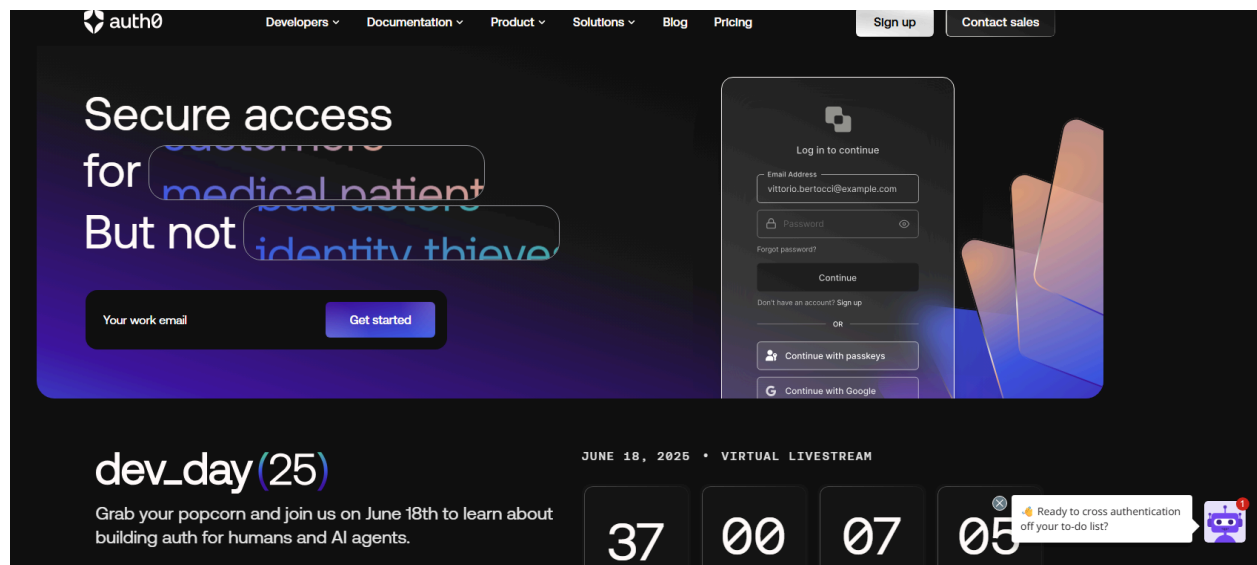

Project agenda: To establish single sign-on (SSO) functionality between Auth0 and Zendesk, enabling seamless and secure user authentication.

Description: As a systems administrator at DynamicWeb Inc., I was tasked with implementing a secure and efficient single sign-on (SSO) system using Auth0 and Zendesk. The goal is to streamline authentication for support agents and end-users, enhancing security and user experience. This project involved configuring both Auth0 and Zendesk to support various authentication methods, including social logins, and ensuring a seamless login process through SSO, thereby improving operational efficiency and data security.

Steps I followed:

1. Created an account in Auth0
2. Created an account on Zendesk
3. Configured SSO in the Auth0 application
4. Logged in using SSO

Tools Used: Windows VM

Let's set you up for success

Account Type

Are you creating this account for yourself or on behalf of a company?

Step 1

Create a Sample App

Your Auth0 tenant can have multiple applications. Let's create one. You can delete this later.

Select a platform for your app

Single-Page App
Javascript web app that runs in the browser

Regular Web App
Traditional web app that runs on the server

Native/Mobile App
Mobile or desktop app that runs natively on a device

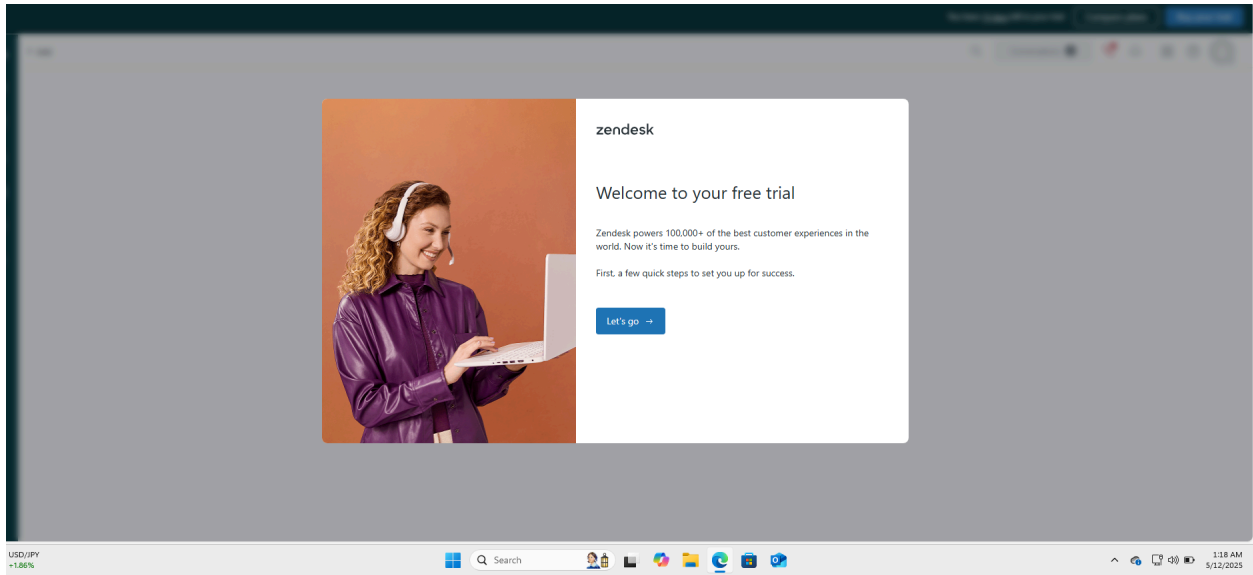

Other
Looking for a different platform or don't know

Select the technology

Tutorial

Zendesk Configuration Instructions

Important: This integration uses SAML, which only works with certain versions of [Zendesk](#)

1. Login as an Admin to Zendesk

2. Select the **Security** menu

3. Select the **Single sign-on** menu

4. Click **Configure** for **SAML**

5. Check **Enabled**

6. Use this URL for the **SAML SSO URL**:

1. Login as an Admin to Zendesk

2. Select the **Security** menu

3. Select the **Single sign-on** menu

4. Click **Configure for SAML**

5. Check **Enabled**

6. Use this URL for the **SAML SSO URL**:

`https://dev-6tm2pjeasmxm5tr.us.auth0.com/samlp/DJqFFqwPD0wsLaFLeNtR9IXRFmy8AwfS`

7. Use this as the **Certificate fingerprint**:

`6A:C1:95:40:6D:C6:38:9F:5E:84:AA:53:88:68:A2:72:41:92:43:06`

8. Use this URL for the **Remote logout URL**:

`https://dev-6tm2pjeasmxm5tr.us.auth0.com/v2/logout?returnTo=https://Janefrances.zendesk.com`

Note that you can use any URL for the `returnTo` parameter, but you must set it as an Allowed Logout URL in the Advanced tab of your [Tenant Settings](#). The example above uses your Zendesk home.

9. Click **Save**. Note SAML SSO is now configured, but is not automatically enabled for Zendesk users. [Enable external authentication](#) in Zendesk to allow users to sign in with SSO.

SAML

9. Click **Save**. Note SAML SSO is now configured, but is not automatically enabled for Zendesk users. [Enable external authentication](#) in Zendesk to allow users to sign in with SSO.

SAML

SAML is an industry standard SSO framework typically used by large enterprises for communicating identities across the internet. [Learn more](#)

☒ **Enabled**

Enabling SAML will make it available for your staff and end users when you choose SSO as an authentication method

SAML SSO URL*

This is the URL that Zendesk will invoke to redirect users to your identity provider. Note that our Assertion Consumer Service (ACS) URL is `https://matjm.zendesk.com/access/saml`

`https://tenant.auth0.com/samlp/123PBephJKD4K7Y1kBE0VwVJ5387abc`

Certificate fingerprint*

This is the SHA256 fingerprint of the SAML certificate. Obtain this from your SAML identity provider

`C7:51:CF:AA:B8:59:F1:43:C8:00:63:25:8D:08:66:D8:74:36:3D:CC`

Remote logout URL

This is the URL that Zendesk will use to redirect your users after they sign out. Example: `https://www.example.com/services/logout`

`https://tenant.auth0.com/v2/logout?returnTo=https://tenant.zendesk.com`

Account > Security > Team member authentication

Team member authentication

Choose at least one method for authenticating team members.

☒ Zendesk authentication

Team members will sign in with an email and password.

Password level

Low

- Must be at least 5 characters
- 10 attempts allowed before logout
- Must be different from email address

☒ External authentication

Team members can sign in using third-party services.

Keep Zendesk authentication active as a backup

If external authentication goes down, team members will have another way to sign in. [Learn about external authentication down time](#)

Single sign-on (SSO)

Select one or more SSO methods for team members. The Single sign-on page is where you create and manage these configurations. [Go to Single sign-on page](#)

When you use SSO, you need to do your own identity and email address verification.

The screenshot displays the Zendesk user interface. The top section, titled "Single sign-on", explains that SSO allows team members and end users to authenticate through an external identity provider, with a link to "Learn about SSO options". A table below shows the configuration for a "Test" SSO setup using "SAML" for "Team members", with a status of "Active" and "Primary for team members".

Configuration	Type	Users	Status
Test	SAML	Team members	Active Primary for team members

The bottom section shows a list of 6 tickets. The left sidebar includes navigation options like "Your work", "Shared work", and "Completed work". The right sidebar shows "Ticket statistics" (0 solved) and "Open tickets" (6). The "Updates" section on the right lists recent activity, such as "Zendesk increased the priority on SAMPLE TICKET: Do I put it together?".

Tickets List:

Customer	Ticket Title	Status	Time
The Customer	SAMPLE TICKET: Meet the ticket	Open	Today 04:15 #1
Ingrid Van Dijk	SAMPLE TICKET: New delivery address	Open	Today 04:20 #3
Zhang Wei Xu	SAMPLE TICKET: Shipping cost	Open	Today 04:20 #4
Soobin Do	SAMPLE TICKET: Do I put it together?	Open	Today 04:20 #5
Customer	SAMPLE: How does Zendesk work	Open	Today 04:41 #6
Zhang Wei Xu	SAMPLE TICKET: Are products ethically sourced	Open	Today 04:20 #2

I successfully configured single sign-on (SSO) using Auth0 and Zendesk. This integration enables seamless access to Zendesk services through a unified login process, eliminating the need for separate credentials for each platform and improving security and user experience.
